FLOWER
CHOICE IMPORTED

SEEDS
EUROPEAN VARIETIES

FURNISHED IN GENEROUS OVERSIZE PACKETS

FROM THE FLOWER GARDENS OF ENGLAND

For generations England has been famous for her flower gardens. It has been there, in England and Scotland, in the wonderful old country estates and public gardens that many of our most choice varieties have been created. It is to the old world gardeners with their patience, enthusiasm and love for their profession that we are indebted for the great advancement in, and perfection of, floriculture today.

Notes on Raising Flower Seeds

ANNUALS (HARDY). Those families which are sown and bloom the first season, the plants dying with the approach of Winter, such as *Alyssum, Calliopsis, Candytuft, Centaurea, Mignonette, Nasturtium, Poppy, Sweet Peas*, etc. Sow from April to June, the later sowings being confined to rapid-growing annuals only. The ground should be previously prepared by digging, working in a little manure at the same time. The surface should be made level and finely raked. If the weather is dry, give a watering some hours before sowing. Sow thinly and gently press the seed into the earth, covering lightly with finely sifted soil; the very small seeds must have very little covering. Keep the soil moist and shaded until the seedlings are up; the shade can be managed with branches of evergreens or sheets of paper fastened to little stakes. When large enough to handle, thin out freely, leaving space for each plant to develop to its full size. Thinning out is best done during dull, moist weather, or in the evening time. In calculating the distance that should be left between plant and plant, it may be taken as a general rule that plants which attain, when fully grown, a height of 1 foot, require to be thinned out to at least $\frac{1}{2}$ foot apart, and so on.

Many of the hardy annuals may be sown in August and September, for Spring and early Summer flowering, and if the seedlings are boldly thinned out at an early stage they become hardy and robust, producing finer plants and a greater profusion of bloom than when sown in Spring.

Hardy Annuals do not, in most cases, transplant well; they should therefore be sown, where intended to bloom.

Half-hardy Annuals. Slower in growth than the Hardy Annuals. They include *Antirrhinum, Aster, Cosmos, Marigold, Salpiglossis, Salvia, Stocks, Verbena, Zinnia*, etc. May be sown in March or April, in gentle heat, in pans, shallow boxes, or pots, a light sandy soil being used. Shade from the sun's rays till seedlings are up; this can be done by simply placing a newspaper lightly over them. As soon as the seedlings are large enough to handle, prick off into

shallow boxes, and when strong enough and all danger of frost is over, plant out on to well-prepared ground.

Those who have no convenience for sowing in heat can sow all **Half-hardy Annuals** in the open border middle of May.

GREENHOUSE FLOWERS such as *Calceolaria, Cineraria, Cyclamen, Primula* etc. Sow in gentle heat, in pans of loam, leaf soil and sand, in equal parts, placing a piece of glass over the pan and keeping shaded and moist until the seedlings are up; pot these off singly when large enough, and replace in heat, shading and keeping close until established, and pot on as necessary.

PERENNIALS. Those plants which do not usually blossom until the following year after sowing, but continue to flower and increase each year thereafter, many however, will flower the first season from seed if sown in February indoors, and planted out. Some popular perennials are *Aquilegia, Delphinium, Digitalis, Gaillardia, Hollyhock*, etc. Sow from March to July in pans or in drills on a prepared bed of light, rich soil and keep shaded and moist until the seedlings appear. Prick these out as soon as large enough to handle, into shallow boxes or nursery beds, and when strong enough transplant to permanent situations. Do not allow the seedlings to remain too long in the seed pans or to get starved for want of water.

Hardy Alpines. Seeds of Alpines, rock plants, and all hardy Primulaceae should be sown in pots or pans during early Winter, and after a good watering should be stood outdoors against a north hedge or wall where the soil can get frozen. Then when milder weather sets in, bring the pans into gentle warmth and the seeds will germinate freely. After March it is better to wait and sow the seed in Winter, giving the treatment as recommended above.

BIENNIALS require similar treatment to perennials. They include *Campanula, Pansy, Sweet William*, etc. The plants die after the flowering season.

NOTE.—In the case of very hard-shelled seeds it will be found a good plan to steep them in tepid water for some hours, previous to sowing, as this will hasten their germination.

SWEET PEAS and seeds which are liable to attack from mice should be steeped for half an hour in kerosene oil previous to sowing.

NEW and RARE LILIES

➡ From SEED

These rare and expensive Lilies can be raised from seed by treating similar to perennial flowers. They like a mixture of sand, loam and peat. The public has now an opportunity to raise some of these grand sorts. Most of the following varieties will flower in the second year after sowing, and all should become flowering specimens in the third year.

LILIUM, SULPHUR-GALE HYBRIDS (New). Resulting from crosses between *Liliums sulphureum* and *regale*. Larger and more vigorous grower than *regale*. 3½ feet.

LILIUM REGALE. Trumpet-shaped flowers, washed inside with yellow and shaded outside with brownish-pink; quite hardy. Height 3 feet.

LILIUM, BACKHOUSE HYBRID MARTAGON (Illustrated). Crosses made by the late Mrs. Backhouse between *L. martagon* and *L. hansonii*; beautiful color combinations, rosy-pink, straw yellow with crimson spots, orange yellow spotted purple, etc. Height 5 to 6 feet. Award of merit, R. H. S. 1925.

LILIUM MARTAGON ALBUM. Very fine Lily, 4 to 5 feet high, carrying 20 to 30 pure waxy white flowers of orthodox Turks-cap shape.

LILIUM COLUMBIANUM (Canadian Lily). 2½ feet high, turban-shaped flowers, golden yellow, spotted red.

LILIUM SZOVITZIANUM (Illustrated). Beautiful large Turks-cap flowers, rich straw yellow, spotted with black. Height 4 to 5 feet, producing as many as 20 flowers like pendulous bells. Very early.

D & T Co.

LILIUM BACKHOUSE HYBRID MARTAGON

LILIUM GIANT HIMALAYAN. A noble Lily, when established, will attain a height of 10 to 12 feet, with numerous long, tubular white flowers washed and streaked inside with purple; quite hardy; fine for woodland groups.

LILIUM DALMATICUM HYBRIDS. Fine race of garden Lilies, growing 6 feet high, the spikes carry 30 to 40 flowers in all shades of mauve to dark purple, some pale pink and white with blush pink, etc.

LILIUM WILLMOTTIAE. 4 feet high, with 20 flowers on a stem which are 3 inches across and of glowing orange spotted with brown.

LILIUM WASHINGTONIANUM. Sweet-scented, funnel-shaped flowers, pure white dotted with purple. Height 3 feet.

Price, any above variety,

pkt. 60c.

PROFESSIONAL GARDENERS' COLLECTION

One packet each of the 10 varieties \$5.00

D & T Co.

LILIUM SZOVITZIANUM

ANTIRRHINUM (Snapdragon)

Treat as half hardy annuals (mixed soil). Seed may be sown in the open ground early in May and be had in bloom in July-August, but it is best to start the plants indoors in pots or flats or in a frame in March and transplant the seedlings out-of-doors as soon as weather will permit.

TRIVETT'S TRIUMPH (New) (Height 4 to 5 feet)

New, immense blooming sorts, reaching a height of almost 5 feet, and producing tremendous heavy flower spikes. If specimen spikes are desired do not pinch back the young plants. Ideal for greenhouse or outdoors.

CALCEOLARIA

ENGLISH GROWN SEED 

Gold Medal Strains

Culture.—*Calceolaria* should be sown in June or July in pots or seed pans, the compost being two parts good loam, one part fine leafmold, and one part sand. Make the soil fairly firm and sow the seed evenly on the surface; do not cover the seed with soil, but place a sheet of glass over it. When dry, do not water overhead, but submerge the pan to the rim and wait till the water soaks through. When the second seed leaf appears, prick off the young plants into boxes and shift on into pots as growth progresses.

NEW CALCEOLARIA, "ALBERT KENT"

The plant grows about 18 inches high, and is covered with immense trusses of blooms, the individual flowers of which are medium in size, like a falling drop of water. The color is golden yellow with rich maroon blotch. It comes about 75 per cent true from seed. A feature of this variety is that it can also be utilized for outdoors in localities where *Calceolarias* are successful for bedding.

Culture.—Successive sowings should be made from March to June, in shallow seed pans, in a compost consisting of two parts leafmold, one part loam, and one part sand, passing all through a half-inch sieve; cover slightly and place in a temperature ranging from 50 to 60 degrees. Keep the seeds almost dark. As soon as the seedlings appear, prick them off into boxes or pans, in a compost similar to the above. When the plants are fairly into growth, remove them to a cooler temperature, and when large enough, pot on into 3-inch pots, adding a little more loam to the compost. Place near the glass until ready to shift into larger pots. When the plants are beginning to fill the flowering pots with roots, water frequently with weak liquid manure, or top-dress with any good fertilizer. The obconica type prefers very little heat.

TWO FIRST PRIZES!

AT THE INTERNATIONAL FLOWER SHOW
NEW YORK, MARCH, 1926

Mr. F. O. Johnson, Superintendent for Mrs. Harold I. Pratt, Glen Cove, L. I., informs us that they were awarded first prize in the pot plant class, and first prize in the cut flower class, at the International Flower Show, New York, March, 1926, for specimens of *Statice*, Suworowi, selected, grown from our seed.

All the *Statice* are useful as cut flowers and keep a long time after cutting. They are everlasting and can be dried for use as Winter decorations.

For outdoor flowering, seed should be started in boxes or frames (in February and March) similar to Asters, Zinnias, etc., and planted out when weather permits. For greenhouse culture (*Statice* grows to perfection in cool greenhouse), seed may be sown July and grown on in pots or the bench, coming into bloom just after Chrysanthemums are over. For March flowering inside, sow seed in September, and if large specimens of the Suworowi type are desired make several shifts to larger pots to encourage development, finishing with 8 or 10 inch pots. Note. Where the seed is furnished in clusters, they should be broken up before sowing.

Suworowi Selected (*Russian Statice*). Flower spikes of bright rose, resembling the Butterfly Flower. Splendid for greenhouse or outdoors. This variety is very prominent in the London flower shops, sometimes called "Cathedral Flower." (Illustrated).

oz. \$3.00 ¼ oz. \$1.00 pkt. 30c.

Trivett's Rosy Cluster (See illustration). A new variety producing clusters of bright, rosy-pink flowers, on long, wiry stems. 2 feet.

oz. \$3.00 ¼ oz. \$1.00 pkt. 35c.

Trivett's Mauve. Large, mauve-blue flowers relieved with small, creamy-white florets. Height 2 feet.

pkt. 50c. 5 pkts. \$2.25

Trivett's True Blue. Rich royal blue, tones well with our mauve, or contrasts with the yellow. 2 feet.

oz. \$1.50 ¼ oz. 50c. pkt. 15c.

Yellow Bonduelli. Bright yellow, fine companion to our mauve sort.

oz. \$1.50 ¼ oz. 50c. pkt. 15c.

White Canary. Graceful plant. Height 18 inches. Flowers pure white intermixed with canary yellow.

oz. \$3.00 ¼ oz. \$1.00 pkt. 35c.

Russian Statice. See Suworowi

PERENNIAL STATICE

For outdoors and greenhouse.

Arborea. Beautiful light blue greenhouse sort. Height 2 feet. This and "Macroptera" make excellent pot plants, and splendid for cutting.

oz. \$4.50 ¼ oz. \$1.50 pkt. 35c.

Macroptera. Soft dark violet, very suitable for greenhouse culture; extra choice.

oz. \$4.50 ¼ oz. \$1.50 pkt. 35c.

Caspia. For perennial borders and cutting. Height about 3 feet. Large bouquets of flowers. Beautiful lilac-mauve color.

¼ oz. \$3.75 ⅓ oz. \$2.00 pkt. 50c.

Silver Cloud (Incana). White, for borders and cutting, Height 18 inches.

One pound of beans is equal to about one pint, and will sow a row 50 feet long

Make drills about 2 inches deep and 2 to 2½ feet apart, sow seed 1 or 2 inches apart and cover. As the young plants grow, draw a little soil against them on both sides as a support, repeating from time to time as the plants develop. Pods should be picked for the table when about 4 inches long. Sowings may be made every 2 weeks up to August 10th.

English Broad Windsor. Shell beans. Cooks similar to Lima Beans..... .40 3.00

Culture of Lima Beans:

Do not sow too early, wait until the soil is warm. BUSH LIMA BEANS should be sown in rows 2 feet apart, placing the Beans eye down every inch or two. When plants are about 2 inches high thin out to about 6 inches apart. POLE LIMAS: Prepare hills with poles 8 or 10 feet high, place 6 Beans to each hill, covering over about 2 inches. When plants reach the top of poles pinch off to increase crop.

MAMMOTH LONG RED MANGEL (FIELD BEET)

BROCCOLI

Brocoli (Ital.) Sparkelkohl (Ger.) Broccoli (Fr.)

Much in demand by the better New York Hotels on account of its delicate Asparagus-Cauliflower flavor.

THE TRUE HEADING BROCCOLI
Note size of heads on photograph
grown from our seed on Long Island

Dietz's Emerald Isle. An improved green headed variety that, owing to earliness and rapid growth, is one of the few that will "head up" in this country, producing heads like Cauliflower, but grass-green in color, retaining this color after cooking. After the large main head has been cut, the plant will produce a number of smaller heads which should be bunched together for cooking. A good proportion of stem should be cut with the heads, these cook soft and are very similar to Asparagus. Cook, prepare and serve like Cauliflower. Delicious flavor, a combination of Asparagus and Cauliflower.

Oz. \$5.00, $\frac{1}{4}$ oz. \$1.50, pkt. 50c.

D & T Co.

DIETZ'S EMERALD ISLE BROCCOLI

BRUSSELS SPROUTS

Berza de Brussels (Ital.) Rosekohl (Ger.) Chou de Bruxelles (Fr.)

Dietz's Exhibition. Produces abundance of large, solid, well-shaped sprouts. Unequaled for exhibition and table use.

Oz. 75c., $\frac{1}{2}$ oz. 40c., pkt. 15c.

Dietz's Table Dainty. For those who appreciate small, fine sprouts; dwarf growing and the earliest.

Oz. \$1.00, $\frac{1}{2}$ oz. 60c., pkt. 25c.

Long Island. Half dwarf. An American variety well suited to our climate, and extensively grown for the New York market; very robust grower.

$\frac{1}{4}$ lb. \$1.50, oz. 50c., $\frac{1}{2}$ oz. 30c., pkt. 10c.

Sow seed of Brussels Sprouts about 15th of May, thin out young seedlings, and when 3 inches high, plant out in garden in rows 3 feet apart and 2 feet between the plants. When heads begin to form, break off leaves from plant, commencing with the lower ones, and following up the stem as the Sprouts develop. Brussels Sprouts are of very late maturing habit, the flavor is much improved by slight frosts. Some gardeners find it advisable to sow much earlier than above date, for their particular locality.

DIETZ'S TABLE DAINTY BRUSSELS SPROUTS

D & T Co.

DIETZ'S EXHIBITION BRUSSELS SPROUTS

How to Grow Broccoli—The type we offer above is, in our opinion, the only sort worth while attempting to grow in this country. Most of the varieties popular in Europe do not do well here. "DIETZ'S EMERALD ISLE" is such a rapid grower that the seed may be sown at different times and several crops secured. However, those which come in during July and August are somewhat inferior, being inclined to bolt or break into flower and seed. For real quality and production, it is best to treat like Cauliflower, that is, secure an early crop in frames from a February sowing and a late crop outdoors (September and October) from a June sowing.

DIETZ'S GARDEN PEAS

Choice American and English Grown Seed

Culture—The soil should be deeply dug, 2 spades deep, enrich with well-rotted manure. Seed may be sown as early as ground can be worked, the round-seeded sorts are very hardy, but care should be used not to sow the wrinkled varieties too early. Sow in double rows 1 foot apart and 4 feet between each double row. Sow seed liberally, covering about 2 inches. Netting may be placed in center of double row or brush may be used for support.

It is a good plan to sow 3 kinds at the same time—an early medium and late sort. They will thus mature after each other. Successive sowings can be made up to May 15th. Some gardeners obtain fair results by sowing an early variety in July for late Summer crop. One quart is sufficient for 75 to 100 feet of single row.

DIETZ'S WORLD'S RECORD

SEED POTATOES

Potatoes prefer a light rich soil; if stable manure is used, it should be applied the year before. The use of artificial fertilizer is strongly recommended, about $\frac{1}{2}$ ton per acre.

Open furrows about 3 feet apart and 6 inches deep, sprinkle fertilizer then cover with 2 or 3 inches of soil; cut the Potatoes allowing 2 or 3 eyes to each piece, plant 15 or 18 inches apart and cover with remaining soil. Spray growing plants with Pyrox. Four sacks (11 bushels) when cut, will plant an acre.

GREENHOUSE SORTS

Dietz's Choice. Newest and most improved greenhouse forcing Tomato; robust growing plants producing at short intervals immense trusses of smooth, uniform, bright scarlet fruit of unsurpassed flavor.  **pkt. 75c.**

Sutton's Best of All. Well known English variety. (*Sutton's Seed*). **pkt. 65c.**

Sunrise (Carter's). Perhaps the most widely grown of all greenhouse sorts. **pkt. 35c.**

Stirling Castle. Exceedingly popular sort, medium size, round, smooth fruit, bright red, excellent flavor and heavy crop. **pkt. 25c.**

Greenhouse Culture—Tomatoes are especially desirable when obtainable out of season. Fruit of good quality can be procured by growing on in pots and shifting to larger sizes when pot-bound, finishing with 8- or 10-inch size, or they may be planted in the bench. A temperature of 60 deg. is about right. Pinch out all side growth, water thoroughly, but not too often.

D & T Co.

A WELL-GROWN CROP OF DIETZ'S DISCOVERY TOMATO ON THE SINGLE STAKE METHOD. NOTE HOW THE SUNLIGHT AND AIR REACHES THE LARGE CLUSTERS OF FRUIT, PREVENTING MILDEW, ROT, BLIGHT, ETC. KEEPING THE FRUIT CLEAN AND RIPENING THEM TO PERFECTION

HOW TO GROW GOOD TOMATOES

Sow seed of early sorts in February under glass, in frames, or boxes indoors. When seedlings are about 2 inches high, plant into flats, giving about 4 inches apart or into small pots and later shifting to 4 inch pots. About the middle of May (weather permitting), plant in open garden in prepared places, 3 feet apart each way. The ground should have been dug 1½ feet deep, using a supply of well-rotted manure or mixture of bonemeal and sheep manure. As the plants grow, they should be tied to trellises or heavy stakes, cutting out all except three or four of the strongest branches, or if special fruits are desired, only one main stem to each stake. Once a week they should be gone over and all undesirable side growth pinched out; the cutting away of foliage, however, can be overdone. When any particular lot of plants have sufficient crop of fruit and flowers, growth may be stopped by pinching off the tops of all leading branches in order to encourage ripening. Water freely and spray for insects and disease. Keep a watch for cutworms when plants are young, use cutworm killer. (Page 83). Main crop and late sorts should be sown in March and treated as above. Final or very late sowing may be made in open ground in early June.

TURNIP

GROWN FOR US IN ENGLAND

D & T Co.

DIETZ'S PRIZE MODEL

One ounce will sow 150 feet of drill, 2 lbs. for an acre in drills, 3 to 4 lbs. if sown broadcast.

Culture—For early Turnips, sow seed thinly in open ground in Spring in drills 18 inches apart, covering the seed about 1 inch, thin out seedlings to 3 or 4 inches apart. For succession sow every two weeks until May 15th. For Fall and Winter crops, sow in July and August. A good crop may often be grown by scattering seed thinly in the cornfield at last cultivation. For Rutabaga, sow seed in open ground during June and July. Take up the roots just before Winter, cut off leaves, and store in cool cellar, or pit outdoors. For exhibition, the bulbs should be carefully washed and all small, fibrous roots removed; rub clean with coarse towel.

D & T Co.

Culture of Field Turnip, also called Swede (Swedish Turnip) Russian Turnip, Rutabaga. These Winter-keeping Turnips are larger in size than regular garden Turnips, of solid or firmer flesh, making them more suitable for Winter storing. They require about one month longer in which to mature. Seed should be sown during June-July in drills, 2 feet or more apart, to allow for cultivation. Covering the seed an inch or two, thin out the young seedlings early to about 1 foot apart. Cultivate between the plants, especially in dry weather, watch carefully for Turnip fly; if observed, spray with solution of fishoil soap and water (See page 83). For aphids (plant lice), use tobacco solution. Field Turnip prefers a fairly stiff and moderately moist soil, they provide a very agreeable table dish and are excellent for stock feeding.

HAY and PASTURE GRASS

D & T *Old English*

FORMULA

The mixture that has made the pastures of old England famous, slightly changed to suit the climatic conditions of this country. Where a fair sprinkling of Clover is desired, we advise customer to purchase about 5 lbs. of medium Red Clover to each 100 lbs. of grass separately and broadcast after sowing the grass, this method will assure an even growth of Clover in the field whereas if the Clover seed is mixed with the grass seed, it will sift down to the bottom of bags.

Sow about 100 lbs. of our mixture per acre.

WILSON'S O. K. PLANT SPRAY

at Factory Prices.

WHY BUGS LEAVE HOME

The best general, all-around liquid insecticide for flowering and ornamental greenhouse plants, and for general outside spraying. This spraying material is now being used on many of the finest estates in America to the exclusion of many of the old time insecticides. Does not leave any disfiguring deposit on the plants nor has it any objectionable odor. Highly recommended. Gal. \$3.00, 5 gals. \$12.00, 10 gals. \$20.00, 25 gals. \$50.00, 50 gals. \$90.00.
